Flora balance is a liquid live microbial food supplement that contains the lactic strains *Lactobacillus brevis* and *Lactobacillus buchneri*

Description

A balanced intestinal flora is essential for a normal bowel function, a well-functioning immune system and optimal energy levels. An optimal bowel function is indeed an essential requirement in order to efficiently take up nutrients from our food and to be able to absorb vitamins and minerals.

When using less healthy diets, in periods of stress or when taking antibiotics, the balance in our intestinal flora can be disturbed (dysbiosis). This dysbiosis often manifests itself in digestive problems, fatigue and a less well-functioning immune system.

Under these circumstances, it is necessary to re-balance the intestinal flora.

Flora Balance is a liquid live microbial food supplement with a unique patented formulation, developed using the latest scientific findings in the field of probiotics.

Flora Balance contains the following beneficial lactic strains: *Lactobacillus brevis* and *Lactobacillus buchneri*.

These beneficial lactobacilli once again restore and maintain the balance of intestinal flora.

Flora Balance contains no less than 4 billion of these live beneficial strains of lactic acid per ml fluid. Research has also revealed that only 4.5 million strains per ml are killed by gastric acid. The vast majority survives the passage through the stomach, thus allowing Flora Balance to efficiently restore the balance of intestinal flora. This is in contrast to conventional probiotics in the form of capsules, with which the vast majority of lactic acid bacterial strains do not survive the passage through the stomach.

INSTRUCTIONS

40ml or three tablespoons a day, preferably in the evening before bedtime and at least one hour after the last meal. The treatment should be applied for at least two months.

When suffering from severe intestinal disorders it is recommended to take 40ml both morning and evening during the first month. It is best to take the morning dose on an empty stomach.

Flora Balance has a sour taste, which is necessary for its functioning.

The recommended daily intake should not be exceeded and the product should be stored out of reach of young children.

Food supplements should not replace a varied and balanced diet and a healthy lifestyle.

Composition

Composition				
Scientific name	English name	Used form	Amount	Function
Effective microorganisms - Lactobacilli: Brevis, Buchneri	Em 1	Lactic acid bacteria: - Lactobacilli Brevis, Buchneri	0,2 liter	Boot medium
